

Evince Mage Installation Guide

Support:
support@evincemage.com

Installation Instruction :

- 1) Login into your Magento Backend and Go to system -> Tools -> Compilation and make sure it says Compiler status: Disabled. If it is not then disable it.
- 2) Below are the structure of Magento Root at left side and extension package at right side.

- 3) Upload all extension files from extension package to Magento Source in the same way as the file-structure.
- 4) Now Go to -> System -> Cache Management page, and click on “Flush Cache Storage” button. After this step, extension is installed.
- 5) To enable the compilation, Please go to System -> Tools -> Compilation and click “Run Compilation Process” button. (Optional)
- 6) Now logout from Magento Backend and again login to Magento Backend for refresh all the permissions.
- 7) Now go to System -> Configuration
You will find all the installed extension here on the left side section.
