

Evince Social Login

Evince Social Login extension provides login on ecommerce store without filling all the details of email address and other required fields. It provides you one click login features to the store. It provides four type of social site login feature - Facebook, Google, Twitter and LinkedIn.

Admin can follow this user manual guide to configure the login on the magento2 store. The entire social login can be separately disabled by the admin site. It saves much time of the customer to fill the entries of the login detail and login or register to the system.

Customers aren't patient enough to create new account on your site as it requires them a lot of information. To save their time & keep them on your site, let them use their social accounts.

Features :

- Include social login with Facebook, Google, Twitter, LinkedIn.
- Admin settings to disable the social login feature.
- Customer can add other social connect account with the store after login
- Multi language support
- Social Login available on Login page, Register page and Checkout page
- Social Login extension has very user friendly interface
- Easy installation
- 100% Open source
- Compatibility with the Magento 2.0

User Guide

1) After installing extension, for configure it, go to admin → Stores → Configuration → Evince Extensions → Social Login. Here you can enable any of the social login.

Social Login Google Configuration Options ⌵

Enable Google Login [GLOBAL]

Social Login Facebook Configuration Options ⌵

Enable Facebook Login [GLOBAL]

Social Login Twitter Configuration Options ⌵

Enable Twitter Login [GLOBAL]

Social Login Linkedin Configuration Options ⌵

Enable Linkedin Login [GLOBAL]

After installing the extension, you will able to find the setting for this from
admin -> Stores -> Configuration -> Evince Extensions -> SocialLogin

2) Google Login -

To access API credential and secret key of the Google, admin has to create a GoogleProject from Google Developers Console.

Dusring the creation of Project in Google Developers Console, you have to insert Callback URL of your project. Then insert this for Google Login callback URL -

<https://www.example.com/index.php/evincesociallogin/google/connect/>

Copy "Client Id" and "Secret Key" from Google Project and place it in Social login configuration.

3) Facebook Login -

The popular social networking site Facebook probably has more than 1 billion active users, so they can also be potential customer for your online store. Configuring the social Facebook option requires the admin to create new Facebook application for accessing App Id and Secret Key.

Copy "Client Id" and "Secret Key" from Facebook Project and place it in Social login configuration.

4) Twitter Login -

For enabling Twitter login functionality on your online shop, admin has to create a twitter app.

In the Callback Url field provide -

<http://example.com/index.php/evincesociallogin/twitter/connect/>

Navigate to the "Key and Access Token", copy the API credential and paste them to the Evince SocialLogin configuration.

5) LinkedIn Login -

To configure LinkedIn social login functionality, admin needs to create LinkedIn application from Developer Console of LinkedIn.

In authorized redirect Url, provide -

```
http://example.com/index.php/evincesociallogin/linkedin/connect/
```

Paste Consumer key and consumer secret to access the configured Evince SocialLogin LinkedIn button on your online store.

6) After configuring the extension, the front will look like this.
